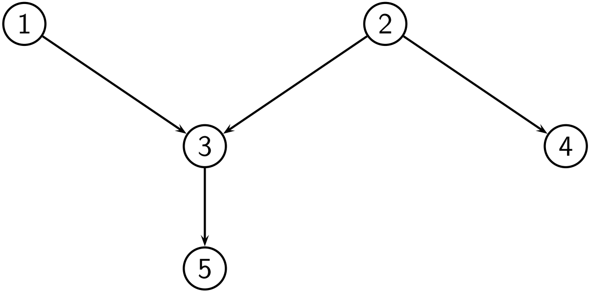
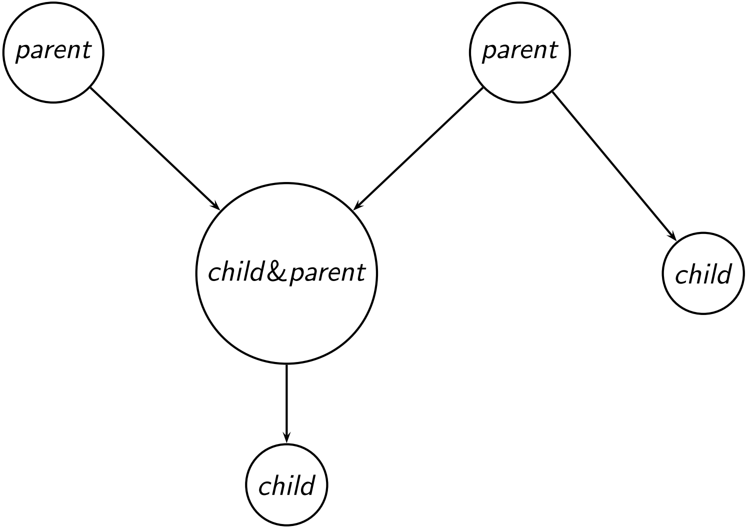
Graph theory - Part I

Directed Acyclic Graph



Bayesian Network



Probability theory

Reminder

Definition (Independence)

Let A, B denote random variables. Then A and B are independent iff

$$P(A \cap B) = P(A) * P(B) \tag{1}$$

Definition (Conditional Probability)

Let A, B denote random variables and $P(B) > 0$. The probability of A given B is defined as:

$$P(A|B) = \frac{P(A \cap B)}{P(B)} \tag{2}$$

Combining these approaches

Definition (Conditional Independence)

Two variables X and Y are conditionally independent given $\mathbf{Z}$ w.r.t a probability distribution P, denoted as $Ind_p(X; Y|\mathbf{Z})$, if $\forall x, y, \mathbf{z}$, where $P(\mathbf{Z} = \mathbf{z}) > 0$,

$$P(X, Y|\mathbf{Z}) = P(X|\mathbf{Z}) * P(Y|\mathbf{Z}) \tag{3}$$

where $P(X, Y|\mathbf{Z}) = P(X \cap Y|\mathbf{Z})$.

Blocked paths and d-seperation (Examples)

Define three sets

Let Z_1, Z_2 and Z_3 denote sets with:

$$\begin{aligned} Z_1 &= \{W\} \\ Z_2 &= \{R, V\} \\ Z_3 &= \{R, P\} \end{aligned}$$

Statistics

The G^2 value

Definition

We calculate the G^2 value under the nullhypothesis of the conditional independence of $Ind(X_i, X_j | \mathbf{X}_k$ holding. Then, the G^2 value is defined as:

$$G^2 := 2 * \sum_{a,b,c} S_{ijk}^{ab\mathbf{c}} * ln \left(\frac{S_{ijk}^{ab\mathbf{c}} * S_k^{\mathbf{c}}}{S_{ik}^{a\mathbf{c}} * S_{jk}^{b\mathbf{c}}} \right) \tag{4}$$
